

CS544: Topics in Networks
Jan-May 2020

Instructions for students:

- 1) Each group of students will be given a set of questions from the research paper that has been assigned to them.
- 2) The questions will be sent to you by **8 PM on 5th June 2020** and you have to submit your answers by **6 PM on 6th June 2020**. Any answer received after that will **NOT** be considered for evaluation.
- 3) The number of questions for a group will be a multiple of the number of students in it. The questions must be **divided equally** among the group members, that is, if there are n questions for a group with m members, then each member must answer n/m questions and different members must answer different questions.

(a) The questions must be divided among the members of a group **sequentially** (as the names are written in the attached document) in a **round robin manner**. I explain this by means of the following example.

Consider Group 1. The names of the members of this group are written in the following sequence in the attached document:

194101012 - Avikash Singh Chawla

194101038 - Rahul Vats

194101043 - Sanil Upadhyay

194101034 - Mudragada Lohith Surya Anjaneya Kumar

Suppose that 8 questions are given to this group. Then, the allocation must be as follows:

194101012 - Avikash Singh Chawla (Questions 1 and 5)

194101038 - Rahul Vats (Questions 2 and 6)

194101043 - Sanil Upadhyay (Questions 3 and 7)

194101034 - Mudragada Lohith Surya Anjaneya Kumar
(Questions 4 and 8)

(b) If a member does not answer any of his/her assigned questions, marks will be deducted accordingly.

(c) If a member answers any question that is *not* assigned to him/her, **NO** marks will be given for that question to him/her.

4) It is mandatory to write your name and roll number below your answer.

6) Merge all your group members' answers in a single pdf file and upload it on Moodle. The file name should be your Group ID.

In case some member of a group is not available/reachable, others must submit their consolidated answers in time as mentioned above with a mention of the unavailable/unreachable member.

7) Any questions related to the papers to me or to the TAs will not be entertained.

8) Any kind of plagiarism or unethical means or inter-group discussions, if proven, will be dealt with strict actions (including 0 points for the entire end sem exam for all the group members).

9) The weightage of this exam is 20% of the total marks for this course.
